

THE PROBLEM:

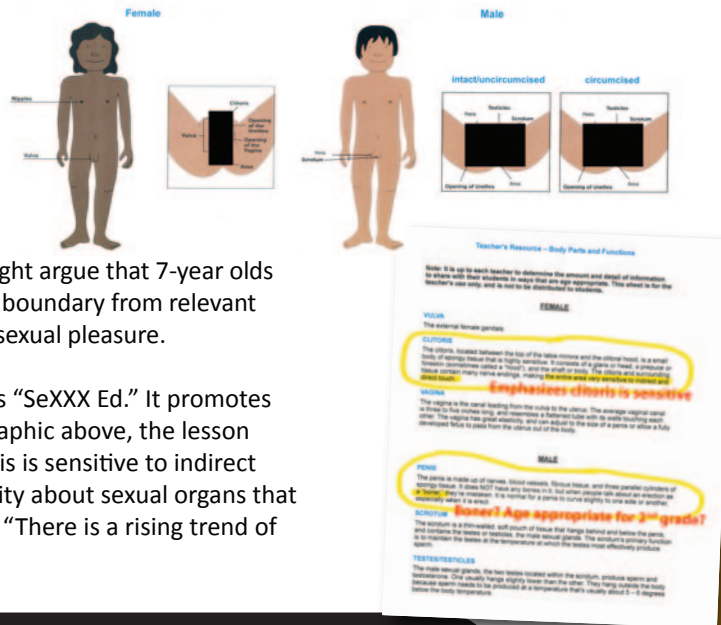

Comprehensive Sexuality Education (CSE) is exposing children in publicly-funded schools to graphic sex ed and unscientific gender theories.

Educational priorities have turned from reading, writing and arithmetic to identity politics, political activism, gender exploration and high-risk sexual behavior.

THE THREATS:

■ **SEXUAL & SOCIAL GROOMING:** This 2nd grade lesson (from Rights, Respect, Responsibility, www.3RS.org) exposes children to sexualized content. According to the National Center on Sexual Exploitation (NCOSE), “Exposing children to sexual content is a form of abuse.” While some might argue that 7-year olds should learn proper anatomy, this lesson crosses a boundary from relevant information to titillating children’s curiosity about sexual pleasure.

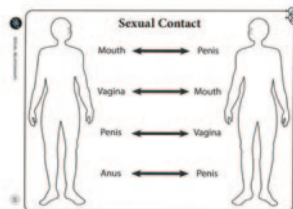

■ **PUSHING PLEASURE & ILLICIT SEX:** CSE is “SeXXX Ed.” It promotes sexual pleasure as a right for all children. In the graphic above, the lesson plan for 2nd graders emphasizes that, “...the clitoris is sensitive to indirect and direct touch.” This stirs up a dangerous curiosity about sexual organs that has negative consequences. According to NCOSE, “There is a rising trend of child-on-child sexual abuse...”

Dr. Andre Van Mol, of the American College of Pediatricians, confirms, “Premature exposure to concepts their developing minds cannot grasp, grooms children for early sexual debut and predators, rather than protecting them.”

Curriculum example from “Positive Prevention Plus” normalizing anal and oral sex for kids. Notice androgynous figures designed to eradicate heteronormative sex, replacing babies and bonding with perversion aimed at kids.

■ **TEACHING CONSENT TO MINORS:** In CSE, consent is presented to children as young as 4 years-old. Parents believe this will help their children to say “NO” to inappropriate touch and sex. In actuality, it’s teaching children to negotiate for sexual pleasure.

WHERE CAN I LEARN MORE?

The government, influenced by special interests, shouldn’t have a right to indoctrinate an entire generation of youth in a monolithic, hedonistic worldview. But public schools are so entrenched with special interests, they may never return to serving their original purpose. Now, parents must decide what values with which to raise their children and make responsible educational choices that protect kids from this dangerous agenda.

You CAN escape the public school monopoly. Parents have so many options today. Visit our website to learn more: www.ProtectOurKidsNow.org

STOP Sexualization & Gender Indoctrination in Schools!

EXPOSE the Explicit Content Targeted at Kids!

DID YOU KNOW...

Comprehensive sexuality education (CSE), also known as “Abstinence Plus,” is aggressively rolling out in classrooms across the nation? Special interests are spending millions to indoctrinate our kids. Teaching materials affirmatively recognize all sexual orientations and instruct children in high-risk sexual behavior. Science is out and social, sexual & political engineering are in. Gender is based on emotions, not biology. Our children are being activated as political pawns to push this agenda. Look inside to see the proof!

...THE THREATS...THE INACCURACIES...THE SEXUALIZATION...

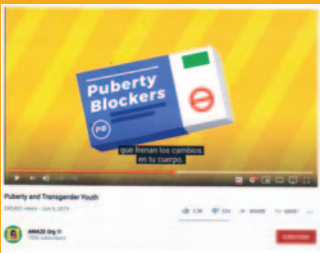

ABOLISHING BINARY GENDER: Public schools actively deny what they’ve been teaching in biology class for generations—that there are two genders. Children are taught that gender is fluid, based on emotion. CSE is essentially rewiring how our youngest learners perceive reality. This is emotional child abuse that has led to an epidemic social contagion of transgenderism. According to Abigail Shrier, author of *Irreversible Damage*, (Regnery 2020), from 2016 to 2017, gender surgeries for females transitioning to males in the US quadrupled.

Below are books widely used in public elementary school classrooms that confuse children about their biological nature.

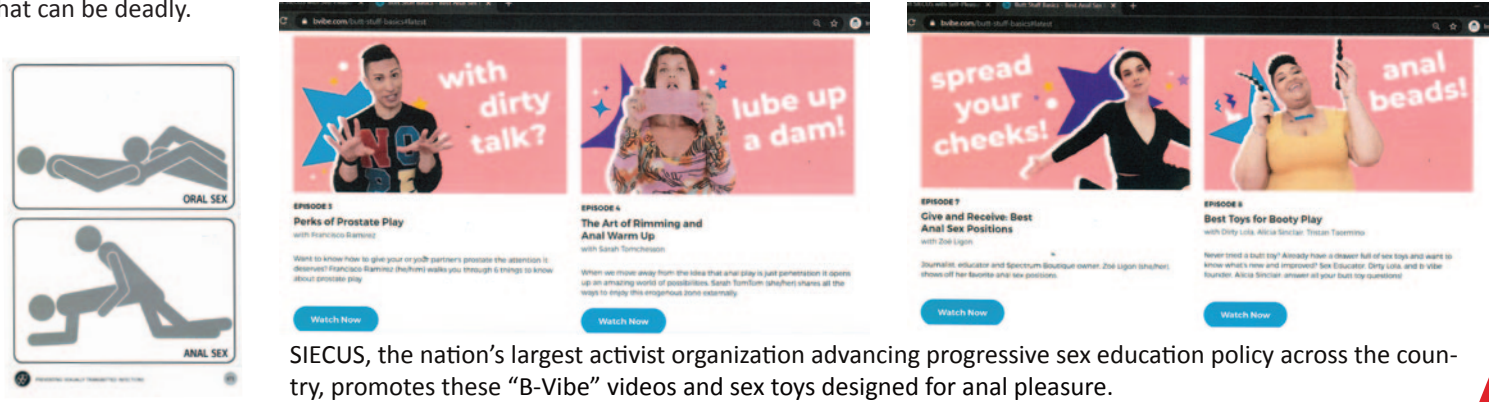

Worm Loves Worm – “Well one of you has to be the groom” “I can be the groom says worm.” “I can too,” says worm. “We can be both.” ... “That isn’t how it’s always been done.” “Then we’ll just change how it’s done.”

CSE teaches that a person with a penis can be a girl and a person with a vulva can be a boy. Videos suggest (Amaze.org) if kids are uncertain about their gender, puberty blockers can pause sexual development while they decide.

SEXUAL ORIENTATION: Because CSE must affirmatively recognize all sexual orientations, the mechanics of sex acts are taught including vaginal, anal, and oral sex as well as techniques for using sex toys to augment missing anatomy. Many children are traumatized by the explicit graphic detail of these presentations. However, over time, they become desensitized to these materials. When youth are encouraged to experiment with sexual orientation, they are groomed to embrace sexual behavior that can be deadly.

SIECUS, the nation’s largest activist organization advancing progressive sex education policy across the country, promotes these “B-Vibe” videos and sex toys designed for anal pleasure.

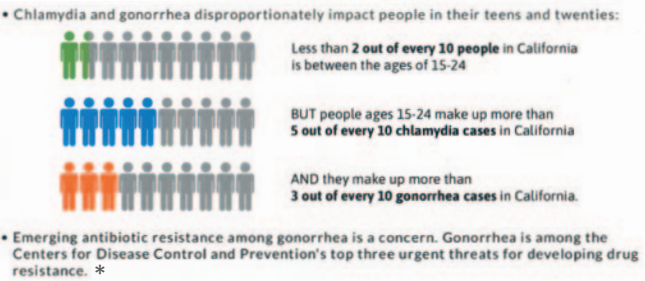

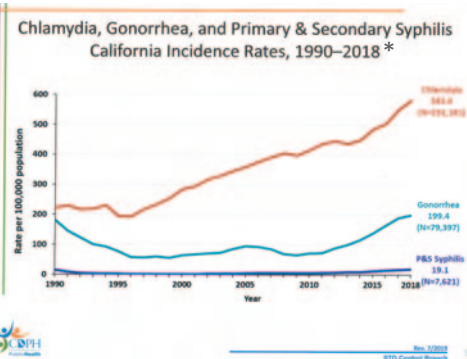

MISLEADING MEDICAL INACCURACIES: Teenagers are taught that, “Condoms are extremely effective when they are used consistently and correctly—that means, every time a couple has oral, anal, or vaginal sex, from the beginning of the act to the end.” (Rights, Respect and Responsibility, Using Condoms Effectively: www.3Rs.org). While condoms DO reduce risk of infection, they cannot eliminate exposure associated with dangerously high-risk sexual contact. In an overzealous pursuit of “inclusivity,” educators avoid stigmatizing risky behaviors. This will have deadly consequences.

STI RISK BEHAVIORS ANSWER KEY		
HIGH RISK for STIs	LOW RISK for STIs	NO RISK for STIs
Unprotected vaginal sex	Vaginal sex using a male or female condom correctly	Bathing together
Unprotected anal sex	Anal sex using a condom correctly	Kissing on the lips
Unprotected oral sex	Oral sex using a latex barrier or cut-open condom correctly	Solo masturbation
		Holding hands
		Abstaining from sexual activity

According to the Center for Disease Control website, “People who report using condoms consistently reduced their risk of getting HIV through insertive anal sex with an HIV-positive partner, on average, by 63%, and receptive anal sex with an HIV-positive partner, on average, by 72%.” (<https://www.cdc.gov/hiv/risk/ analsex.html>). **This means the risk of getting HIV is still between 28-37%!**

Since the adoption of CSE in San Francisco, L.A. and San Diego in 2012, and the passage of CHYA in 2016, STIs have skyrocketed among 15-24 year olds.

CUTTING PARENTS OUT OF CHILDREN'S HEALTHCARE:

Schools instruct minors on their rights to access confidential medical services without parental knowledge or consent. These include abortion, IUD's, sub-dermal, long-acting reversible contraception, and STI/HIV screening and treatment. Activist lawmakers are working to expand this to include transgender hormones, sex reassignment surgeries and drug abuse/mental health treatments.
